

### RMK Series Rack Kit Description

RMK Series rack kits with shelf and custom face plate are engineered to provide professional installation of non-rackmount equipment up to 17.375"W. Shelves are offered in 14" and 18" depths with vented bottom and hinged sides in 2RU - 5RU sizes. Hinged shelves provide easy installation with the added benefit of compact shipping and storage economies. Models assemble with (3) flat-head screws per side. Each face plate is made to your specification and secures on standard EIA spacing (after the shelf is mounted) to achieve a finished appearance for non-rackmount equipment. To install, simply open the box, secure equipment at the top

and/or rear using the (4) adjustable L-brackets supplied, then mount the shelf and face plate. Mounting hardware is included. *If equipment changes in the future, only a new face plate is required not a whole new kit.* Sturdy 14 gauge steel construction provides substantial support. Optional full-width top clamp may be ordered separately to secure equipment that is less than 16.125"W. Optional rear extension brackets are also available for installations that require rear rail support or cable lacing.

**Help us fabricate your custom face plate with precision accuracy.  
Please select one of the two options below:**

- 1) Ship your equipment to Lowell Manufacturing to measure. This is the preferred option to ensure that each custom face plate fits exactly. Often the front of equipment is sculpted/angled or has setbacks and moving components (CD's) that require the face plate to be fitted rather than simply framed. We will be careful with your equipment and ship it back in the carton received within two business days (please include contact information below). **OR** . . .
- 2) You can take measurements using the template below and email or fax us the data.

#### Information to include:

**Fax to 636-257-6606 or email [jscilligo@lowellmfg.com](mailto:jscilligo@lowellmfg.com)**
