6-1/2" In-ceiling loudspeaker #ES-62T
ready for recessed installation in ceiling or wall
features 6-1/2" coaxial driver & 32W transformer

Model #ES-62T includes:
• 6-1/2 inch coaxial driver
• 32W transformer
• Metal enclosure (attached)
• Press-fit grille, scrim, pull-tool
• C-ring with support rails
• Paper template for cut-outs
• Paint shield for driver

features:

• Description: Model #ES-62T produces excellent intelligibility for speech and full-frequency response for music making it ideal for retail, commercial, industrial, institutional, and residential applications. This self-contained in-ceiling or in-wall speaker system with 6-1/2" coaxial driver has a high-frequency PEI tweeter with acoustic lens to provide the kind of crisp, high-frequency response expected from high quality coaxial speakers. The ported enclosure is tuned for extended low-frequency response, while the speaker’s wide dispersion can actually reduce the number of speakers required to produce even coverage in distributed speaker systems.

• Driver: 6-1/2" coaxial driver
• Transformer: 32W transformer with tap selector switch mounted behind grille. Tap selections for 25V, 70V or 100V speaker systems, and 4ohm (UL minimum) transformer bypass position.

• Enclosure:
  – Factory-mounted enclosure ships attached to the driver (non-removable).
  – Durable 20 gauge steel, painted grey.
  – Ported enclosure is tuned for extended bass response
  – Built-in reversible mounting dogs aid fast installation, while allowing the speaker to be mounted in drywall, wood, tile or almost any type of ceiling with thickness up to 2.125"
  – Removable (4 pin) Phoenix-style connector with 2 terminals for input to speaker and 2 parallel terminals for output to next speaker in string.
  – Internal volume = 379 cu.in.

• Baffle: Low-profile front baffle formed from UV-rated high impact plastic.
• Grille: Fine mesh press-fit grille (white) includes scrim and pull tool.
• Installation Aids: (included)
  – C-Ring: Reinforces the edge of drywall ceiling cut-outs and works with the support rails to uphold the weight of the speaker assembly.
  – Support Rails (2): Rails are used with the C-ring to uphold the weight of the speaker assembly and help prevent sagging tiles when the speaker is installed in a lay-in tile ceiling.
  – Template: Paper template is used to properly mark cut-outs for mounting holes.
  – Paint Shield: Plastic shield fits over the driver to protect it if the baffle is to be painted.
• Installation Aids: (optional, order separately)
  – #ES-6-RIB Rough-in Bridge: For new construction (drywall or plaster ceiling) before finished ceiling is installed, the bridge serves as a placeholder for the speaker.
  – #ES-6-RTR Retrofit Trim Ring: The ring mounts this speaker to an existing (pre-installed) 8" speaker enclosure with 11.25" diameter mounting bolt circle. Includes hardware and rubber bumpers. Note: Minimum enclosure depth is 9.5" from edge of ring (that touches ceiling) to rear of enclosure. Minimum backbox opening dia. is 10.375" to allow dog ears to fit. In addition, the enclosure must have straight sides (not tapered).

*Overall Depth includes grille and enclosure. Overall Diameter includes trim ring. Net weight includes speaker, enclosure and grille (no installation aids).

Note: Speakers are sold in pairs.
The front tap selector switch is protected behind the grille.

The fine-mesh grille is designed to press into position.

The dog ears on the enclosure speed installation in almost any type of ceiling.

A plastic shield is included to protect the driver if the baffle is to be painted.

The C-ring and support rails distribute speaker weight to avoid sagging ceiling tiles.

Use the paper template to mark the ceiling or wall for speaker cut-outs.

The front tap selector switch is protected behind the grille.

6-1/2” In-ceiling loudspeaker #ES-62T

The loudspeaker shall be Lowell #ES-62T. It shall include a high-performance 6-1/2” coaxial loudspeaker, ported bass reflex enclosure and press-fit grille for recessed ceiling/wall installation. Frequency response shall be 64Hz-20kHz ±6dB. Sensitivity for the system shall be 88.6dB log average @1W/1M over the frequency response range, measured in half-space. The speaker shall be constructed of a polypropylene cone with rubber surround and a PEI tweeter. The woofer magnet weight shall be a minimum of 15.45 oz. (438.1g) and the woofer voice coil diameter shall be 1” (25.47mm). The transformer shall have primary taps for 100V (32, 16, 8, 4.2 watt); 70V (32, 16, 8, 4, 2 watt); and 25V (4.4, 2.2, 1.1, .55, .28 watt) with a selector switch mounted on the front under the grille that will include a 4 ohm transformer bypass position. The factory-mounted enclosure shall be 20-gauge steel (painted grey) with internal volume of 379 cu.in. It shall have a seismic restraint ring tie-point on the rear for use where required by code or ordinance. It shall feature four dog-mount ears that allow it to be mounted in a ceiling with a maximum thickness of 2.125” (54mm). A template shall be provided to assist in cutting mounting holes. A rear access cable or flexible conduit entrance strain relief shall be provided with a termination cavity that encloses a four-pin Phoenix-style connector. The connector shall include two terminals for input to the speaker and two parallel terminals for output to the next speaker in the string. The system shall include a C-ring for use in reinforcing the edge of drywall ceiling cutouts, or for use with the included support rails to guard against ceiling tile sag from speaker weight. Front baffle shall have a diameter note more than 9.84” (249.9mm). The unit shall also include a press-fit, fine mesh 20-ga. CRS grille with UV rated powder coating (epoxy white), and shall include a thin piece of white scrim and a grille-pulling tool.

Optional Retrofit Ring No. ES-6-RTR.
Retrofit trim ring mounts speaker #ES-62T to an existing (installed) 8” speaker enclosure with 11.25” dia. mounting bolt circle. Minimum enclosure depth is 9.5” from edge of ring (touching ceiling) to rear of enclosure. Minimum backbox opening diameter is 10.375” to allow dog ears to fit through. Enclosure must have straight sides (not tapered).

Optional Bridge No. ES-6-RIB.
Steel rough-in bridge with galvanized finish reserves space for speaker placement.
technical specifications

PERFORMANCE
- Power Handling: 50W RMS (at 8 ohms) measured per EIA Standard RS-426B
- Sensitivity: 88.6 dB log average SPL (at 8 ohms) @ 1W/1M over the frequency response range, measured in half-space.
- Maximum SPL: 105.6 dB (calculated based on power rating and measured 8 ohm sensitivity).
- Impedance: 8 ohms (nominal), 4.0 ohms @ 12461 Hz (min.) Note: Selector knob shows 4 ohm position as mandated by UL for minimum impedance.
- Frequency Response: 64Hz – 20kHz ± 6dB
- Conical Dispersion Angle: 120° conical @ 2kHz octave (-6dB)
- Crossover Frequency: 3kHz
- Transformer Taps: 100V (32, 16, 8, 4.2W); 70V (32, 16, 8, 4, 2W); 25V (4.4, 2.2, 1.1, .55, .28W)

PHYSICAL (Full Range Speaker)
- Woofer Cone: Specially formulated polypropylene
- Surround: Rubber
- Woofer Magnet Weight: 15.45 oz. (438.1g)
- Woofer Voice Coil Dia.: 1” (25.47mm)
- Tweeter Cone: PEI with acoustical lens
- Tweeter Magnet Weight: 0.64 oz. (18.09g)
- Tweeter Voice Coil Dia.: 1” (25.47mm)

MECHANICAL
- Input Terminals: 4-conductor removable Phoenix-style connector
- Net Weight (speaker & grille): 7.5 lbs. (3.4kg)
- Shipping Weight (pair): 22.4 lbs. (10.2kg)

MOUNTING
- C-ring: One included with each speaker
- Tile Support Rails: Two included with each speaker
- Rough-in Bridge: Optional rough-in bridge for new construction—drywall or plaster ceiling—before the finished ceiling is installed. Order separately.

SPL vs. FREQUENCY (1W/1M)

IMPEDEANCE

Impedance reading expected from a typical 1kHz impedance meter is 9.5 ohms with the selector switch in the 4 ohm position.

POLAR DATA 180° (half space mounting)

1000Hz octave
2000Hz octave
4000Hz octave
8000Hz octave
Lowell ES Series speaker systems are thoroughly tested to provide specifiers and contractors with accurate data. Test equipment includes the GoldLine TEF-20 analyzer.

- **Power Handling**: specification is based on E.I.A. Standard RS-426B.
- **Frequency Response**: describes the usable response range defined by a ± 6dB window, which is useful in predictive engineering calculations.
- **Sensitivity**: is a computer calculation of the log average sound pressure level (SPL) over the entire engineering bandwidth as given in the Frequency Response (± 6dB).
- **Maximum SPL**: is calculated based on the Power Handling and the measured log average Sensitivity where Maximum SPL = (Sensitivity @ 1W1M) + 10 log (Power Handling).
- **Dispersion Angle**: is defined as the angle of coverage that is no more than 6dB down from the on-axis value averaged over the 2kHz octave band. Since speech intelligibility is dependent upon the 2kHz octave, this specification is useful in designing voice reinforcement and music systems that provide even coverage and intelligibility. The polar plots illustrate how the system performs when hung in free space (360°) or half-space (180°) in the case of a recessed speaker.
