

BOOST performance

with speaker/subwoofer bundles.

ES speaker/subwoofer bundles are optimized for low to medium ceilings in venues that demand quality foreground music. Dance studios, workout facilities, bars and restaurants are just some of the venues where performance drives the overall user experience. Adding a subwoofer to the speaker mix let's you take advantage of wide-dispersion 5¼-inch coaxials speakers without compromising bass frequencies. Speakers can be spaced further apart with the subwoofer placed among them to add the kick that provides for a richer audio experience.

All speakers ship ready to install with factory-mounted enclosure including reversible mounting dogs and removable phoenix-style connectors for fast installation, low profile baffle with fine mesh press-fit grille, C-ring, support rails, paint shield and mounting template. Optional rough-in bridge also available.

BUNDLE:

- **ES-52T-SBN** includes four 5¼-inch 30W coaxial speakers with wide dispersion (165° conical), plus one 8-inch subwoofer.
